

IRRS Blank Scoring Card

Instructions

- s_i (Score): Assigned by the evaluator during the simulation, based on observed behaviour and using the Evaluator Scoring Rubric.
- w_i (Weight): Predefined per scenario using the Scenario Weighting Guide. It reflects the relative importance of each sub-metric in the current context.

Domain	Sub-Metric	s_i (Score: 0–5)	w_i (Weight: 1–5)	$s_i \times w_i$
Procedural Alignment	Escalation path followed			
	IRP referenced during incident			
	Deviations justified			
Operational Execution	Containment-action timing			
	Task coverage			
	Execution accuracy			
Infrastructure Integration	Tool-usage effectiveness			
	Tool alignment to IRP			
	Inter-tool visibility			
Coordination & Communication	Role clarity			
	Decision flow			
	Communication logging			
Post-Incident Follow-Through	Root-cause analysis			
	Lessons learned			
	IRP updated post-simulation			
Totals			$\sum w_i$	$\sum (s_i \times w_i)$
